## **Important Note**

### **Please Read Carefully**

### **Study Tips**

This product will provide you questions and answers along with carefully compiled and written by our experts. Try to understand the concepts behind the questions instead of cramming the questions.

Go through the entire document at least twice so that you make sure that you are not missing anything.

### **Latest Version**

We are constantly reviewing our products. New material is added and old material is revised. Free updates are available for 90 days after the purchase. You should check your member zone at CramBible an update 3-4 days before the scheduled exam date.

Here is the procedure to get the latest version:

1. Go to [www.CramBible.com](http://www.CramBible.com)
2. Click on Member zone/Log in
3. The latest versions of all purchased products are download from here. Just click the links.

For most updates, it is enough just to print the new questions at the end of the new version, not the whole document.

### **Feedback**

Feedback on specific questions should be send to [web@CramBible.com](mailto:web@CramBible.com). You should state: Exam number and version, question number, and login ID.

Our experts will answer your mail promptly.

**THE TOTAL NUMBER OF QUESTIONS IS 425****QUESTION NO: 1**

You work as the network administrator at CramBible.com. The CramBible.com network consists of a single Active Directory domain named CramBible.com.

A CramBible.com user named Mia Hamm uses a Windows 95 client computer named CramBibleWS270. CramBible-WS270 contains a single hard disk drive with two partitions that have been assigned the drive letters C and D. You need to perform a clean install of Windows XP Professional on CramBible-WS270. You decide to install a second hard disk drive in CramBible-WS270 and assign it the drive letter E.

You want the E: drive to become the boot partition. What should you do?

- A. Select Advanced Options from the Install Options dialog box in Setup.
- B. At the command prompt, run `winnt32.exe /syspart:E`.
- C. Define the TargetPath option in an answer file and use the answer file to perform an unattended installation.
- D. Use Sysprep to create an image for CramBible-WS270.

**Answer: A**

Section:(none)

**Explanation/Reference:**

Explanation:

The boot partition is the partition that constrains the %SystemRoot% folder into which set up copies the Windows XP Professional system files. This partition can be the primary partition of a logical partition. You can specify which drive letter or partition Setup should use in the Advanced Options dialog box.

Incorrect answers:

**B:** The syspart switch is used to copy Set up files to a temporary hard disk drive that can be moved to another computer on which the installation is to be performed. The syspart switch marks the specified drive letter as the system partition to which Setup will copy the Setup startup files. CramBible.com The hard drive can then be moved to a new computer where Windows XP Professional Setup will begin at the next phase.

**C:** The TargetPath option of an answer file specifies the name of the folder in which Windows

XP Professional will be installed. It does not specify the drive letter or partition.

D: Sysprep is used to create an image that contains the operating system and the applications that are to be installed on a target computer. However, the Sysprep image can only contain a single partition and will replace the C: drive. ### QUESTION NO: 2

You work as the network administrator at CramBible.com. The CramBible.com network consists of a single Active Directory domain named CramBible.com. All servers on the CramBible.com network run Windows 2000 Server. Half the client computers run Windows NT 4.0 Workstation and the rest run Windows XP Professional. The CramBible.com network also contains a file server named CramBible-SR24.

You need to upgrade a Windows NT 4.0 client computer named CramBible-WS290 to Windows XP Professional. However, the Windows XP Professional installation CD does not contain the drivers for the network adapter card currently installed on CramBible-WS290. You copy the i386 folder from the Windows XP professional installation CD to a shared folder named i386 on CramBible-SR24. In the i386 shared folder you create a folder named Testadpcrd and copy the drivers for the network adapter card to the Testadpcrd folder.

You want the Testadpcrd folder to be copied to the <systemroot> folder on CramBible-WS290 during the upgrade process. After the upgrade, you want to be able to access the drivers in the Testadpcrd folder for future use.

What should you do on CramBible-WS290?

- A. At a command prompt, run the Winnt.exe command with the /r:testadpcrd switch.
- B. At a command prompt, run the Winnt.exe command with the /rx:testadpcrd switch.
- C. At a command prompt, run the Winnt32.exe command with the /copysource:testadpcrd switch.
- D. At a command prompt, run the Winnt32.exe command with the /copydir:testadpcrd switch.

**Answer:** D

Section:(none)

**Explanation/Reference:**

Explanation:

In the i386 folder you will find the Winnt32.exe or Winnt.exe . In the command prompt you use CramBible.com the Winnt32.exe command with the copydir switch. The copydir :folder name create a customized subfolders that can be used with the Windows XP Professional installation. If you use the /copydir option, the folder is not deleted.

Incorrect answers:

A: The /r switch is used with the winnt command. The winnt command is used to install Windows XP Professional on a computer that is not running Windows 98, Windows Me, Windows NT 4 Workstation, Windows 2000 Professional, or Windows XP Home Edition.

B: The /rx switch is used with the winnt command. The winnt command is used to install Windows XP Professional on a computer that is not running Windows 98, Windows Me, Windows NT 4 Workstation, Windows 2000 Professional, or Windows XP Home Edition.

C: The /copysource :folder name is used to create a temporary subfolder for Windows XP Professional files to be used during the installation process. Once the installation process is complete, the folders created with this process are deleted. If you use the /copydir option, the folder is not deleted. 3

### QUESTION NO: 3

You have been assigned the task of installing Windows XP Professional on the Windows 2000 Professional computers at a branch office to CramBible. You copy the installation files from the Windows XP Professional CD-Rom to a network shared folder named \\FileSrv01\WinXP.

Next, you download updates from the Windows Update Web site to \\FileSrv01\XPUpdates using the branch offices 56kbps WAN link.

Because your branch office's limited WAN connection is used for other purposes, you want to use the least possible WAN bandwidth while performing the installations. You also want downloaded updates to be applied to the computers with the least possible administrative effort.

Now, you need to install Windows XP Professional and all the updates on all Windows 2000 Professional computer.

Which action should you take on each computer?

- A. Run the \\FileSrv01\WinXP\Winnt32\dudisable command.
- B. Run the \\FileSrv01\WinXP\Winnt32\copydir:i386\XPUpdates\dudisable command.
- C. Run the \\FileSrv01\WinXP\Winnt32 command, accept the Dynamic Updates defaults, and install the updates.
- D. Run the \\FileSrv01\WinXP\Winnt32/dupprepare:\\FileSrv01\XPUpdates command. Then, run the \\FileSrv01\WinXP\Winnt32/dushare:\\FileSrv01\XPUpdates command. CramBible.com

**Answer: D**

Section:(none)

**Explanation/Reference:**

Explanation:

The /dupprepare switch prepares the downloaded update files to be used during an installation with the /dushare switch. When you run Winnt32.exe with the /DUShare switch, the Dynamic Update wizard is not displayed to the user and no attempt is made to connect to Windows Update.

Incorrect Answers:

- A: The /dudisable switch disables the dynamic update wizard but the installation will only use the original installation files without the downloaded updates.
- B: This is an incorrect command.
- C: If we accept the defaults, the installation wizard will connect to the Internet to download the updates. Reference:Rick Wallace, MCSE (Exam 70-270) Microsoft XP Professional Training Kit, Microsoft Press, Redmond, 2002, Chapter 2, Lesson 3

**QUESTION NO: 4**

You are the senior desktop administrator for CramBible. You get a phone call from one of your Trainees, who is performing a clean installation of Windows XP Professional on a computer that currently runs Windows 98.

He states that the text-based portion of Setup finished successfully. Before the GUI-based portion of Setup starts, the computer stopped responding. He investigated and discovered that there is a problem with a device driver.

You want to know which device is causing the problem. What should you tell him to do?

- A. Modify the Boot.ini file to include the /fastdetect switch.
